Clays

Cosmetic clays exfoliate, clean and invigorate the skin while improving blood circulation. Clay has the ability to absorb excess oils, dirt and harmful toxins from the skin. Clays are present in almost all traditional beauty regimens.

Each cosmetic clay consists of different mineral compositions, and each clay type impacts and benefits the skin differently. The high mineral content of clay rejuvenates the skin while the clay exfoliates and stimulates the blood circulating to the skin. Regular use of clay facials will remove dead skin cells, improve circulation to the skin, remove debris from the pores and bring about a smooth healthy glow.

Clays can be used in facials, body powders, soaps, and as a natural colorant in soaps, emulsions and bath salts.

Our clays are cosmetic grade and in most cases are also USP/ medicinal grade. Our clays have been certified to be lead free and safe for cosmetic use.
