

# NATURAL SOURCING

Specialists in Cosmeceutical Ingredients

## *Floral Waxes*

Floral wax is the solid, fragrant, creamy wax derived from flower petals. Carefully selected flower heads are placed in solvent to first obtain the concrete and absolute. The concrete is then washed with alcohol to extract the absolute from the botanical material leaving behind the natural solid plant waxes. These waxes hold many of the benefits of the botanical including the moisturizing phospholipids.

Floral wax makes a divine, exotic addition to creams, balms and lotions, and it lends thickness and a beautiful aroma. Recommended usage is up to 10%.

**Standard Packaging:** 5 kg, 25 kg, 100 kg
